

Kirami Kirami FinVision® -sauna M Nordic misty

Harvia legend 240 greenflame TW Deep Black Annex, Thermotreated Aspen

Kirami FinVision® -saunas show the high-class finish of a master craftsman

The already surface-treated Kirami FinVision® -sauna M Nordic misty is made of heat-treated (*spruce) panels and heat-treated softwood (* aspen). The sauna has a modern interior. The dark colour and scent of the heat-treated aspen create a gentle and inviting atmosphere. The clear and simple style is suitable for any garden. Thanks to the large glass elements, you can always enjoy the feeling of being close to nature. We are sure that even those who are not used to the sauna at all will become sauna enthusiasts once they get into the sauna mood. We believe that the sauna will become one of the most popular places in your garden.

The sauna is roomy yet compact. The surface area of the sauna is 5.2 m² and the building is roughly 2.55 metres tall. The sauna has been designed for 4–6 people, which makes it perfect for both small and large groups.

The sauna is delivered fully assembled

The Nordic misty -sauna is the perfect solution for a hectic everyday life. The sauna is delivered fully assembled. The roof is also complete. Kirami FinVision® Nordic misty -saunas are always insulated, which helps to ensure that the sauna heats up quickly and keeps the heat in. This makes the sauna suitable also for colder areas.

The benches made of heat-treated softwood (* aspen) and the interior surfaces of the sauna are eye-catching. The benches are easy to lift up for cleaning and maintenance. The large window gives the sauna a more spacious feel. The double-glazed window made from grey, tempered, selective glass also improves the sauna's energy efficiency, and the argon gas between the panes acts as an insulator. The panoramic window has a dark tint, which gives a wonderful balance and gentle feeling to the beautiful view.

The glass door is equipped with a sturdy roller latch, which allows the door to open and close smoothly and stay shut. The glass in the door is a double-glazed, tempered glass element. The door handle is designed to complement the modern style of the sauna and fit your hand perfectly.

**We reserve the right to material changes, if the raw material prices and/or availability of the products change significantly during the validity period. We try to keep the quality of the material at least the same as the original, despite the change of material.*

Kirami Kirami FinVision® -sauna M Nordic misty

Harvia legend 240 greenflame TW Deep Black Annex, Thermotreated Aspen

As a standard the door is on the right side of the sauna and it opens up right-handed.

The outer shell of the sauna is a sleek, heat-treated softwood (* spruce) panel. The heat treatment improves the wood's resistance to rot and reduces the shrinking and swelling of the wood, when moist. The stylish and deep black, surface-treated thermowood is durable and the paint protects the wood from dirt and UV radiation. This easy-to-care and recyclable panel material completes the sauna with a modern and stylish look. The interior surfaces of the sauna are made of heat-treated softwood (* aspen). The sauna's dim atmosphere helps you relax both physically and mentally. Just let your thoughts flow!

The sauna is equipped with a wood-heated Harvia Legend 240 GreenFlame. Every Legend heater is a true masterpiece handmade by Harvia's master blacksmiths. The patinated steel frame of Legend contains a large amount of stones, resulting in wonderfully humid, gentle and oxygen-rich clouds of steam reminiscent of those of a smoke sauna. The heater is delivered separately and installed on site. The scope of delivery: Harvia Legend 240 GreenFlame, Harvia Legend heater body (chimney guard WL300) for the chimney, Harvia black steel chimney (WHP1500) total length 2400 mm, Harvia protective bedding, sauna stones and protective bedding Legend 240. The number of stones recommended for a wood-heated Legend 240 GreenFlame heater 10 boxes of large stones: 200kg, (10-15 cm), plus 2 boxes of large stones, 40 kg, (10-15 cm) placed inside the heater Pipe's grid.
