

Kirami Kirami FinVision® -rugs Nordic misty

The rug is designed to match the colour scheme of the other Kirami FinVision® products and modules.

Kirami FinVision® lounge rug Nordic misty is a tailor-made rug for the Nordic misty lounge. The rug protects the floor from heavy wear and tear, as well as adding a decorative and atmospheric touch to the interior of the lounge.

The lounge rug is Kivu-sisal material, breathable and clean natural fibre (can also be used on underfloor heating) and easy to maintain. It has a thickness of 6.5 mm, weighs 6.9 kg and measures 1.5 m x 1.9 m. The stylish rug covers most of the lounge floor, while leaving the edges of the wooden floor uncovered. The rug is a multi-colour mix of black and beige and is bordered with a 2 cm black outdoor border. The material meets the minimum requirements for colour fastness and is intended for indoor use. When used outdoors, for example on a terrace, when the rug is soaked through, the rug may shrink and change colour when exposed to sunlight. The rug has a dirt-repellent surface and a latex backing. This allows it to stay in place on the floor and prevents sand and dirt from passing through the backing to the floor. The carpet material improves room acoustics (Sound absorption 25 dB) and has been tested according to the EN ISO 140-6 standard. Utilization category 23. Fire protection class: Fire protection class B-s1, d0 means that the product has very little influence on the spread of fire, produces very little smoke and does not form flammable droplets.

Properties of sisal

Sisal is an age-old natural fibre material that suffered a decline in use as synthetic fibres became more common. Sisal is made by drying the leaves of the sisal plant and it is a strong and durable plant fibre. The plant is native to southern Mexico.

Sisal is a rough fibre used for its excellent strength. Because of its roughness, sisal is not used to make clothing, but it can be used for many other purposes. Traditionally, sisal is used to make ropes. Sisal is strong and stretchy and has been a popular material for ropes among sailors for centuries.

Like all fibres, sisal is classified according to the quality of the fibre. There are three grading scales; high quality, medium quality and low quality. High quality sisal is used for textiles such as carpets/rugs. The lowest quality sisal is rope material.

Sisal is used to make carpets and rugs. As a carpet, sisal is durable and dirt-repellent. Sisal carpets are available in a wide range of colours. Because sisal is antistatic, it does not attract dust. Sisal is well-known for its use in eco-homes for the merits of biodegradability and recyclability.
