

## Kirami Kirami FinVision® -terrace Nordic misty

The Kirami FinVision® -terrace for the Nordic misty series is a ready-made module that is easy to connect with other Nordic misty buildings. The terrace can be installed between the sauna, changing room or lounge. Alternatively, the terrace can also be attached as an extension to a sauna or changing room, for example, so that the covered terrace can be used as a comfortable recreation area. A third option is to purchase the terrace as a separate module, for example as a sheltered sun terrace or summer kitchen. Terrace modules are available in different sizes and can also be interconnected if you want a larger terrace space. Imagination, your taste in interior design and your own yard are the only limits as to how this additional module, like other parts of the sauna, can be connected to create the perfect ensemble for you.

The terrace consists of a back wall, a roof, a floor and two support beams on each side of the front. The outer panelling of the terrace's back wall is made of the same spruce panel (STS profile) as in the Nordic misty sauna. The inner sides of the back wall and the roof are made of heat-treated 3D wooden slats, which gives the buildings a nice, light look. Two beams at the front of the terrace allow the terrace modules to be easily connected in different ways to the Nordic misty buildings. The terrace floor is made of heat-treated pine, which keeps the terrace structure looking uniform and light. The roof of the terrace is easy to connect with the other Nordic misty modules, thanks to its uniform clicklock roofing material and construction.

Warmer feelings.

## Kirami Kirami FinVision® -terrace Nordic misty

This smaller terrace is a great addition to a sauna or changing room, with space for a small refreshment area or an outdoor shower. The terrace can also be used as a separate module, for example as a sheltered sun terrace. This smaller sun terrace has space for one sun lounger, for example. The terrace is lifted into place on a prepared flat surface. The building does not have to be connected to other buildings if you do not want this. Your own sun lounger, a good book, pleasant music and a refreshing drink will make your break on a sunny day even more relaxing in a sheltered place. The small terrace can also be combined with one or more M-size terraces, if you want a larger sun terrace, for example. Nothing prevents you from connecting the terrace to a sauna building at a later date, for example. Connecting the terrace to the sauna/changing room/lounge: The terrace is attached to the sauna or changing room and connected at the bottom at the transport supports. The roof is connected with a U-profile sheet. The terrace can be installed attached to the sauna and changing room or it can end as an open terrace. Lighting: There are LED strip lights between the back wall and the roof of the terrace. This indirect lighting creates a pleasant atmosphere and highlights the shape of the 3D panels. There is also one LED light embedded in the ceiling to provide additional light to the terrace when required. A 2-button light switch is mounted on the back wall, which allows you to control both lights separately. Connecting the terrace lights to the power supply: All the electrical connections for the terrace are ready-made and work on a plug and play basis. The light socket can be found at the bottom of the terrace. Dimensions of the smaller S-size terrace: Width: 1470 mm Length: 2300 mm Height: 2550 mm

### Technical information

<b>WEIGHT</b>	175 kg
<b>PRODUCT LENGTH</b>	230 cm
